SUMMARY

Full-Stack AI Engineer with a foundation in Artificial Intelligence & Data Science, specializing in building agentic, LLM-powered products end to end. Experienced across the modern TypeScript/React ecosystem (Next.js, NestJS) and Python-based data workflows, with a strong grasp of secure, multi-tenant system design, REST API architecture, and CI/CD-driven engineering practices. Known for translating ambiguous product requirements into reliable, production-grade features — from conversational AI agents to billing and integration systems — while maintaining test coverage and code quality at scale. Seeking opportunities as a Full-Stack AI Engineer, AI Application Engineer, or AI Developer to build intelligent, production-ready solutions to real-world business problems.

SKILLS

Programming Languages: Python, TypeScript, HTML5, CSS3
Frameworks & Libraries: React.js, Next.js (App Router), Node.js, NestJS, FastAPI, LangChain, LangGraph
Databases: MongoDB, SQL, PostgreSQL (Supabase)
Tools & Platforms: Git, GitHub, VS Code, Vercel
Concepts: Data Structures & Algorithms, OOP, REST APIs, CRUD Operations, Machine Learning Integration, Agentic AI Systems, RLS/Auth Security

EDUCATION

2022 – 2026 **B. TECH – ARTIFICIAL INTELLIGENCE AND DATA SCIENCE** CGPA-8.3
Dhanalakshmi Srinivasan College of Engineering
Coimbatore, Tamil Nadu

2022 **HSLC** 90%
Vivek Vidyalaya Matriculation

2020 **SSLC** 83%
Genguswamy Naidu Matriculation

EXPERIENCE

06/2026 – Present **Full Stack Ai Engineer** Coimbatore, Tamil Nadu
Nano Nino Inc
- Built full-stack features across a multi-tenant AI platform (Next.js/NestJS/Supabase/LangGraph) spanning dashboards, chat/voice agents, bookings, and internal admin tools
- Owned demo/vertical workstreams and integrations (Stripe, Shopify, Calendly, Google Calendar, Wix) with automated test coverage (Vitest/Playwright) and CI hardening
- Strengthened platform security and reliability (RLS policies, signed asset URLs, fail-open chat handling) and led schema/data cleanup migrations

05/2025 **Full Stack Developer Internship** Remote
EY Global Delivery Services and AICTE
- Developed a MERN stack web application using MongoDB, Express.js, React, and Node.js.
- Implemented CRUD operations and secure user authentication.
- Built responsive UI ensuring cross-device compatibility.

PROJECTS

TalkRev.ai — Multi-Tenant Conversational AI Agent
- Designed a LangGraph ReAct-style agent (StateGraph with a chat node and tool node, conditional routing) serving many tenants across chat and voice from a single deployment, with tenant isolation enforced from trusted run metadata.
- Implemented a gap-aware RAG pipeline — parallel prefetch, relevance-threshold rejection, and an agentic knowledge-base search tool — to prevent the model from answering off irrelevant retrieved content.

Emergency Room Overcrowding Prediction Using Historical Data
- Designed and deployed a healthcare analytics platform that predicts emergency room congestion levels in real time, enabling hospital staff to proactively manage patient flow.
- Built interactive dashboards for live patient monitoring, automated alerting for high-risk congestion periods.
- Improved visibility into hospital capacity management through data-driven decision support tools.

CERTIFICATIONS

Elite Certification in Cloud Computing — NPTEL (2024), **Generative AI Certification** — LinkedIn (2024), **Data Visualization Certification** — Tata Consultancy Services (2025)
